# Access Connect

Commercial access control, part of the Connect family

DOORS, READERS AND CLOCKING FROM ONE SYSTEM

# One badge opens the door and clocks them in.

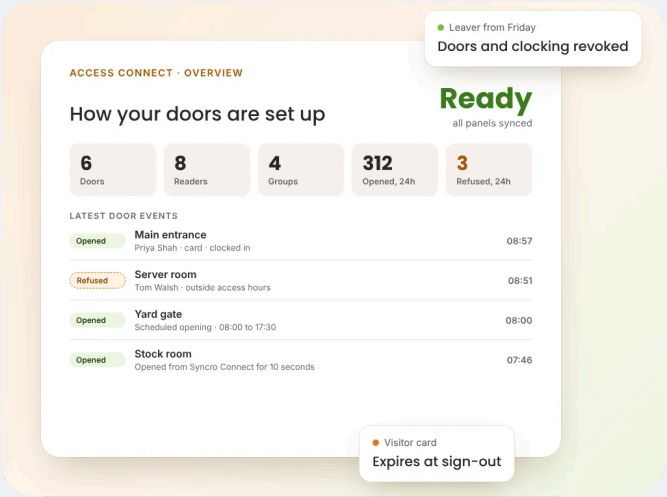

Access Connect controls who can open which doors, and when, from the same Syncro Connect system that runs your time and attendance. Our own engineers survey, install and support it, from a single door to several sites.

- Cards, fobs, PIN, fingerprint, face and palm readers
- Doors that record access only, or clock people in as well
- Open, lock or schedule doors from Syncro Connect
- Every entry and refused attempt logged by door and person
- A leave date stops door and clocking access everywhere

**£395**

**a year for the software**

On top of Syncro Connect at £2 per employee per month. Readers, locks and installation quoted after a site survey.

## Run every door from Syncro Connect

changes made once, at a desk

PER DOOR

### Access, or access and clocking

An entrance can clock people in as they pass. A server room door just records access.

FIRE SAFETY

### On site status

A door can mark someone on or off site, which puts them on the Fire Connect roll call.

SECURITY

### Anti-passback

Stops a card being passed back through to let a second person in.

GROUPS

### Time zones and access groups

Which doors, which days, which times. Warehouse, office or night shift.

REMOTE

### Open or lock a door now

Release a door for a second to five minutes, for a delivery or a visitor.

SCHEDULES

### Scheduled opening times

Leave a shared entrance or yard gate open during working hours.

All prices exclude VAT and are billed annually.

## Ways to open a door

many readers take more than one

**Cards and fobs**
Quick and low cost to issue and cancel. Suits visitors and contractors too.

**PIN codes**
Keypad entry for lower security doors, with nothing to issue or lose.

**Fingerprint**
The established biometric. It will not read through gloves.

**Face**
Contactless and quick at a busy entrance.

**Palm**
Contactless, and reads where fingerprints struggle: dust, wet or worn hands.

## Safe in an emergency

- ✓ Break glass units fitted as standard on controlled doors
- ✓ Automatic release on the fire alarm depends on your alarm panel being connected, agreed at survey
- ✓ Fail safe or fail secure, as your fire risk assessment decides
- ✓ A door swipe can put someone on the Fire Connect roll call

## Every event logged

- ✓ Entries and refused attempts, by door and person
- ✓ Doors forced or held open, recorded in the log
- ✓ Commands sent from Syncro Connect
- ✓ Searchable over 7, 30 or 90 days

### Gates, turnstiles and barriers

We integrate Access Connect with speed gates, turnstiles and car park barriers rather than supplying them. Tell us what you have or plan to fit and we will confirm it at survey. A twelve person office does not need a speed gate, and we will say so.

### Biometrics and UK GDPR

Biometric data used to identify someone is special category data. You need a lawful basis, clear information for staff and usually a data protection impact assessment. The ICO's biometric guidance sets out what is expected, and we will talk you through it.

**What it costs.** The Access Connect software is £395 a year, running on Syncro Connect at £2 per employee per month, which also gives you time and attendance. Readers, locks, cabling and installation depend on your building, so we survey and quote per site. Start with one door and add more later.
