Fire Connect
Fire roll call software, part of the Connect family

REPLACE THE PAPER FIRE REGISTER

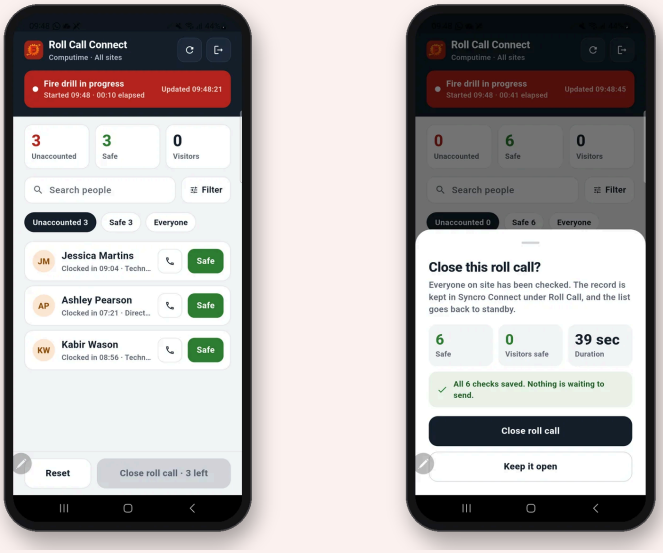

Know who is still inside when the alarm goes off.

Fire Connect puts a live roll call on every fire marshal's phone, built from clockings, door swipes and visitor sign-ins, so the list is right at the moment the alarm sounds.

- A live list of everyone on site, open in seconds
- Mark each person safe with one tap at the assembly point
- Several marshals working the same list at once
- Call anyone missing straight from the app
- A record of every drill, with time taken and accuracy

£395
a year, flat

Whatever your headcount or number of marshals. Runs on your marshals' own iPhone or Android phones.

How it works

from the first clock-in to the record afterwards

1
Everyone checks in
Staff clock in or swipe a door, and visitors sign in at reception.

2
A live list builds
It updates as people arrive and leave. Anyone the system is unsure about is flagged.

3
Marshals open the app
A passcode, fingerprint or face opens it in about a second.

4
Roll call starts
One marshal starts it and every marshal sees it. One tap marks someone safe.

5
Missing at the top
Call them from the app. The roll call cannot close until everyone is checked.

6
A record kept
Time taken, accuracy and a person-by-person report to export.

All prices exclude VAT and are billed annually.

What if something goes wrong on the night?

The marshal's phone is dead

Every marshal you set up can run the roll call on their own phone, or sign in on a borrowed one with their usual details.

No signal at the assembly point

The list stays on screen with the time it was last updated. Nobody is shown as safe unless that tap was saved, and the list catches up when the signal returns.

The marshal is missing

Several people can work the list at once, and anyone with access can pick it up. A paper list in one person's hand cannot do either.

Who is on the list

- Staff as soon as they clock in or swipe a door, off again when they clock out
- Visitors and contractors signed in with **Visitor Connect**, tagged with their host
- A visitor still signed in from yesterday, flagged to check in person
- Each marshal can filter to their own assembly point, department or site

After the drill

- Every roll call logged with time taken and an accuracy percentage
- A person-by-person report to export for your fire records
- Every roll call from every site kept in one place
- Data held in the UK, with access logged

Paper list or Fire Connect?

	Paper roll call	Fire Connect
Accuracy	A list printed that morning	Live, updated as people arrive and leave
Copies	One sheet, in one place	The same list on every marshal's phone
Counting	Names ticked twice or missed	One tap each, several marshals at once
Missing people	No way to contact them	Call them straight from the app
Visitors	Often not on the list	Included automatically
Records	Only if someone files the sheet	Every drill logged and exportable

The one thing no system can fix is someone leaving without clocking out. Fire Connect shows them as missing, which is the right answer: a marshal can call them in seconds rather than send someone back inside.
